

A stylized logo consisting of three concentric circles with four small circles at the intersections, resembling an orbital path or a molecular structure.

Nu rbit

Leading in Nu Space Solutions

The background is a vibrant, stylized space scene. It features large, flowing, organic shapes in shades of red, purple, and blue. Scattered throughout are numerous small white stars and several planets. In the top right, there's a large red planet with orange and yellow patterns, and a smaller yellow and orange striped planet below it. In the bottom left, there's a yellow and orange striped planet. Other planets in shades of blue and purple are scattered across the scene.

Mission Statement:
Bring Space Exploration to you
at the Comfort of your Home

Values:
Innovating, Advancing, and
Teaching

New Age of Space Exploration!

The NuBot 1

A robot that can move through the International Space Station to give users the experience of being an Astronaut

How it Works!

Camera provides live video feed for the user experience

Mesh body shape allows for proper cooling and impact absorption

Charging pad with built in position sensor

Raspberry Pi4 to process data, commands, and communication

Inertia wheels to orient the robot

Motor and propeller to move forward and back

Rechargeable batteries provide power

User Interface

User sees live video feed and controls the Bot in real time through a gamepad at the comfort of their home.

Target Audience

Age Group

15 - 25 Years of Age
Next Generation Engineers
Aspiring Engineers

Experience

Comfort Space Exploration, No
Training and a fraction of the
cost

Market Research

A study from Unistellar shows that 93% of American kids are interested in outer space

Intro-Market Strategy

Early Access

- School and Universities get first access at NuBot
- Building interest in the bot for commercial consumer use

Research

A study from Unistellar shows that 93% of American kids are interested in outer space

How much does it cost?

Overhead Cost Table		Robot Cost Tables	
No. of Engineers	11	Parts and Materials	\$610.15
Eng Salary	\$80,000	Launch Cost	\$4,391.25
Eng Cost/ Year	\$880,000	No. of Robots	3
Office Space/ Year	\$5,868		
R&D Cost/ Year	\$1,000,000		
Marketing Cost/ Year	\$100,000		
ISS Hosting Costs/ year	\$720,000		
Sub total	\$2,705,868	Subtotal	\$15,004.20
Total	\$2,720,872		

What's our Revenue?

Planning to send 3 more robot every year...

Future NuOrbit

- Research (NuBot-R)
- Gaming (NuBot-G)

Research Capabilities

- University and Company Research for low gravity capabilities
- Robot with precise arm controls replacing astronauts in space

Space Exploration

- Asteroid research
- Rover Applications

Gaming

- Team Games
- Tag
- Treasure Hunt
- Zero Gravity Rooms
